

Printed Circuit Board Design and Production

We recognise that the needs of every school are different. To help you with this; under DATA's Digital D&T initiative we'll produce printed circuit boards to your needs and to your specification.

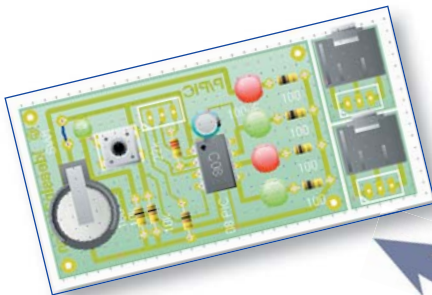

Maybe you just have a concept sketch that you would like developed into a prototype. Just send us your sketch and we'll do the rest for you!

Or your students may have drawn the circuit in some CAD package, but you don't have the facility to produce the PCB's, we'll do that for you.

Maybe your school is interested in product casing design and do not wish to be involved in the aspects of soldering and populating circuit boards. Well if that's the case we can do that for you as well.

Our PCB's are made to the highest standard of professionalism and for bulk orders they are manufactured in China. So for your bulk boards, you'll have the opportunity to produce a silk-screen image on the board and a lacquer mask on the solder side so that your students soldering is 100% accurate.

Whatever your requirements about helping develop electronics in your school, call Les on 01526 378111 or email les@ideasin2action.co.uk and we'll do our best to help you.
